

AbleSpace – Section 5

Cross-Browser and Responsive Testing

Environment: <http://staging.ablespace.io>

5.1 Compatibility Report

Area / Feature	Chrome Desktop	Firefox Desktop	Mobile (390 × 844)	Notes
Signup and login	Pass	Not tested	Not tested	Signup was tested in Chrome. The same account was used for cross-browser checks; signup was not repeated because the assignment allows only one manual account.
Main workflow	Fail	Fail	Fail	Caseload, search, filter and View Data were accessible. But, Refreshing View Data redirected to Caseload.
Forms	Pass	Pass	Fail	At 390 × 844, Add Goal created an empty goal instead of opening the goal-entry form. Edit Goal closed the menu but did not open the edit form.
Navigation	Fail	Fail	Fail	Refreshing View Data redirected to Caseload in Chrome and Firefox desktop and on mobile (BUG-03).
Filter	Pass	Pass	Fail	At 390 × 844, the Filter Apply button was not visible/accessible.
Goal management	Pass	Pass	Fail	Goal creation/editing worked on desktop. Add/Edit Goal actions were not usable as expected at 390 × 844.
Responsive layout	Fail	Not tested	Not tested	Chrome desktop onboarding had the Continue-button overlap (BUG-01). Mobile had Goal and Filter usability issues.

5.2 iPad Mini Emulation

Area / Feature	iPad Mini – Firefox	iPad Mini – Chrome	Notes
Filter	Pass	Fail	Firefox filter panel was scrollable and Apply was accessible. Chrome filter panel could not be scrolled sufficiently, making Apply inaccessible.
Edit / Update Goal form	Pass	Fail	Firefox displayed the complete form including bottom action buttons by scrolling. Chrome opened the form but the bottom action buttons were not visible/accessible.
View Data	Fail	Fail	View Data Refreshing in both browser emulations redirected to caseload page.

5.3 Failures Observed

- BUG-01: Continue button overlaps the IEP Creation feature card in the Chrome desktop 2-column onboarding layout.
- BUG-03: Refreshing View Data redirects to Caseload instead of retaining the current View Data context; reproduced in Chrome and Firefox desktop and on mobile.
- Mobile 390 × 844: Add Goal creates an empty goal instead of opening the goal-entry form.
- Mobile 390 × 844: Edit Goal closes the menu but does not open the edit form.
- Mobile 390 × 844: Filter Apply button is not visible/accessible.
- Mobile 390 × 844: Forms cannot be scrolled enough to access Apply.
- iPad Mini Chrome: Filter panel cannot be scrolled enough to access Apply.
- iPad Mini Chrome: Edit/Update Goal form bottom action buttons are not visible/accessible.

5.4 Testing Limitations

The assignment specifies mobile-view testing by downloading the application from Google Play or the Apple App Store, but it does not provide a specific application name or store link. Therefore, the actual mobile application could not be identified and downloaded for testing.

Instead, responsive web testing was performed using Chrome DevTools at the assignment-specified mobile viewport of 390 × 844. This should be considered responsive web testing, not actual mobile-app testing.

iPad Mini browser emulation was tested in Chrome and Firefox.

The actual device used by the tester was not used as evidence for the 390 × 844 viewport result; the reported mobile result is specifically based on the DevTools emulation viewport required by the assignment.
