Bug Reports

BUG-01 – Continue button overlaps the IEP Creation feature card in the 2-column layout

Bug ID	BUG-01
Title	Continue button overlaps the IEP Creation feature card in the 2-column layout
Severity	Medium
Priority	Medium
Environment	http://staging.ablespace.io — 07-Oct-2026
Browser / Device	Google Chrome on Windows 11 desktop
Reproducibility	Always at the affected 2-column layout
Steps to Reproduce	1. Log in to the staging application. 2. Navigate to the feature-selection step during onboarding. 3. Keep the feature options selected. 4. Use a desktop window where the cards are displayed in 2 columns / 3 rows. 5. Observe the Continue button.
Expected Result	The Continue button should remain outside the feature cards and should not overlap any card.
Actual Result	In the 2-column layout, the Continue button overlaps the IEP Creation feature card. When the window is reduced and the cards switch to one column, the overlap is not present.

Evidence

Figure 2 – Smaller window → 1-column layout: no overlap

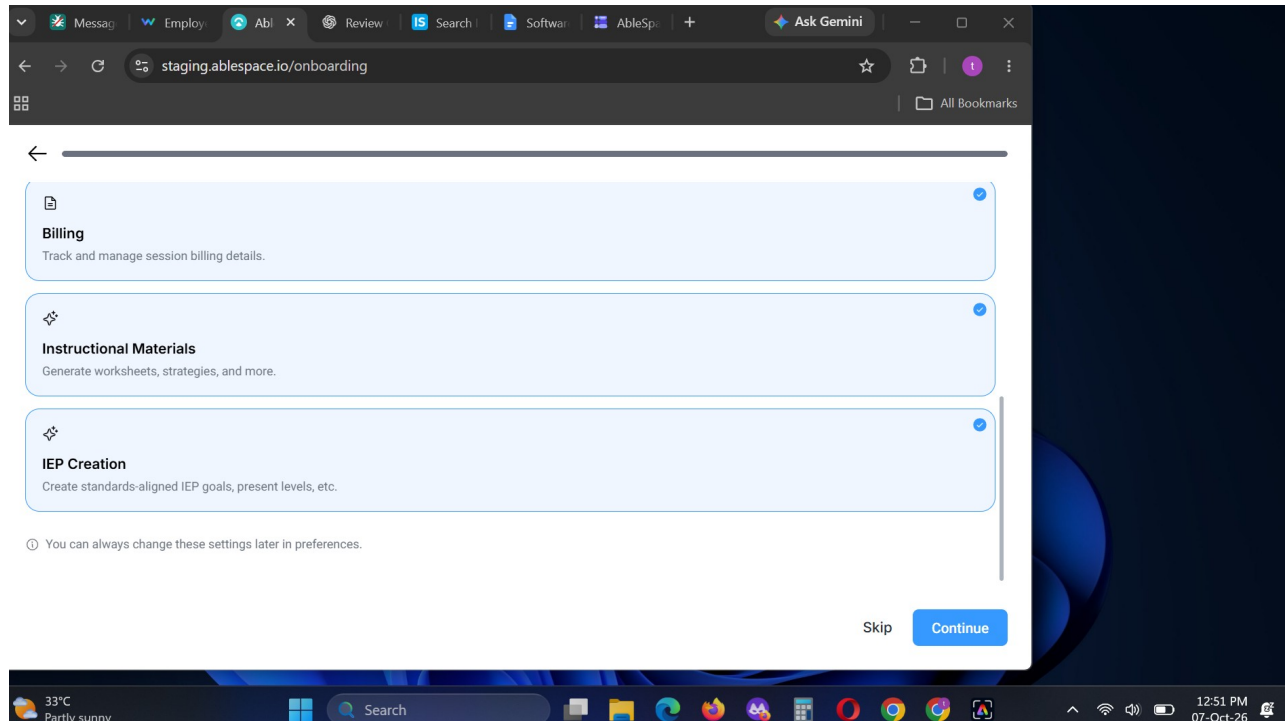

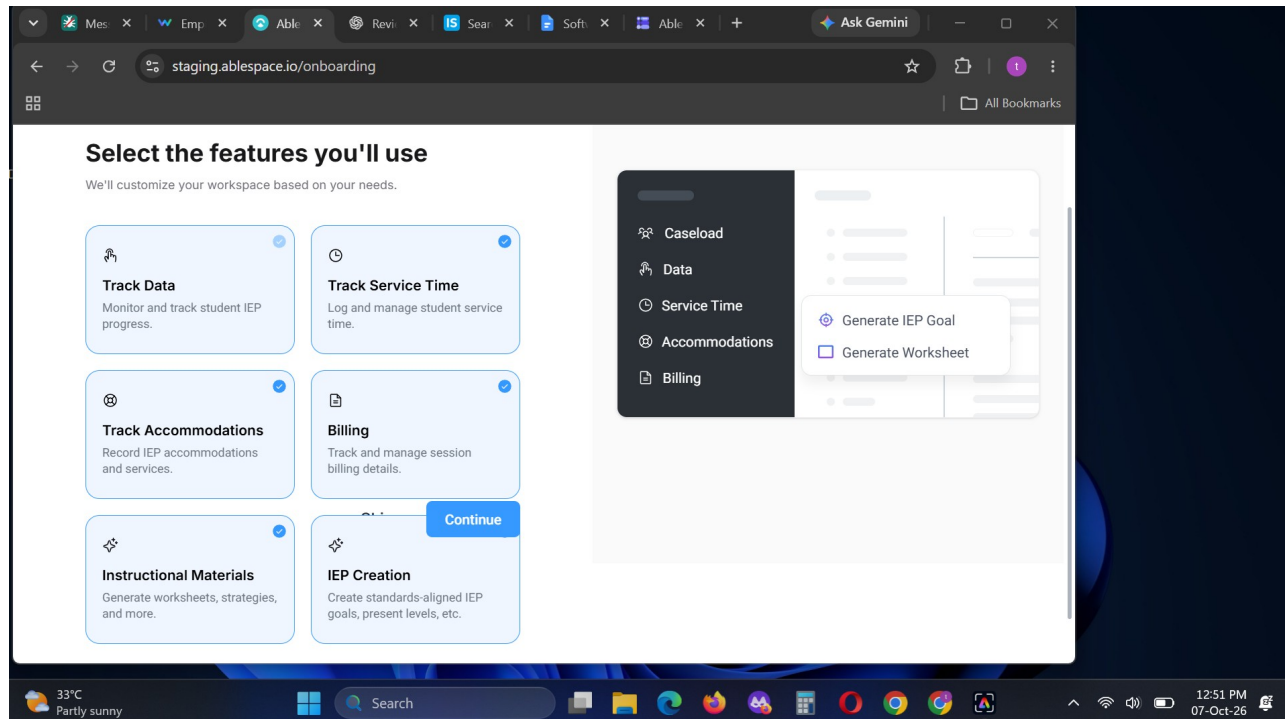

Figure 1 – 2-column layout: Continue button overlaps the IEP Creation card

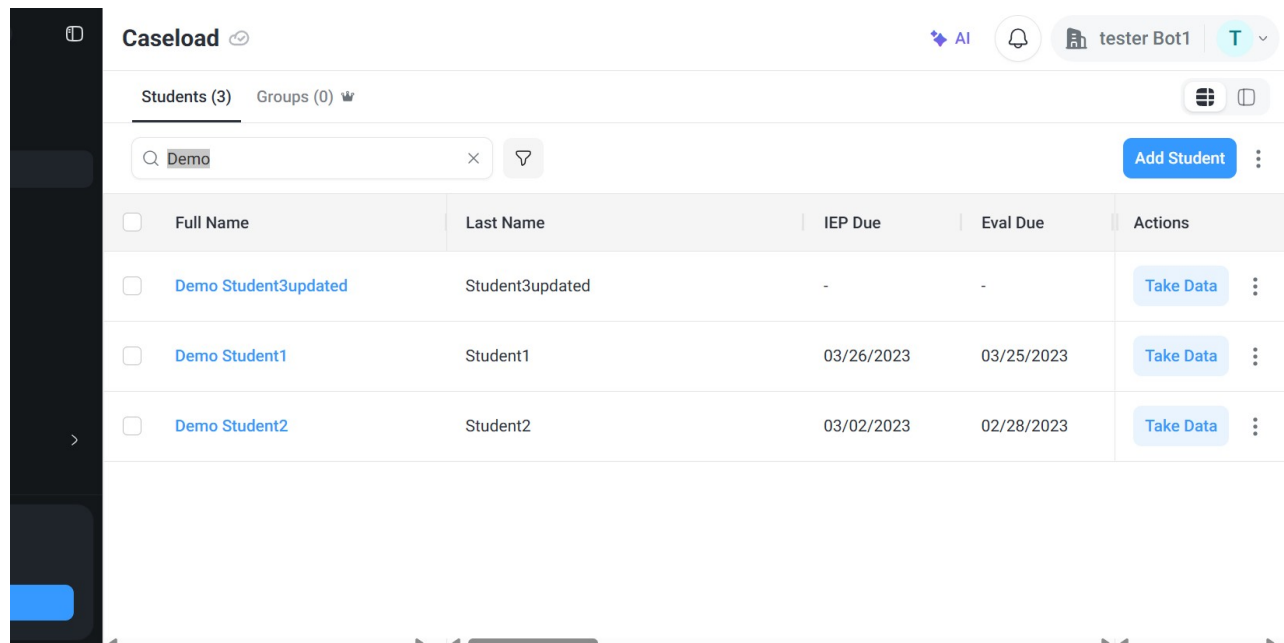

BUG-02 – Student search returns no results when the search term contains leading or trailing whitespace

Bug ID	BUG-02
Title	Student search returns no results when the search term contains leading or trailing whitespace
Severity	Low
Priority	Medium
Environment	http://staging.ablespace.io/caseload — 08-Oct-2026
Browser / Device	Google Chrome on Windows 11 desktop
Reproducibility	Always during testing
Steps to Reproduce	1. Open Caseload. 2. Enter `Demo` in the student search field and observe the matching students. 3. Clear the search field. 4. Enter ` Demo` with a leading space. 5. Observe the search results.
Expected Result	The search should ignore leading/trailing whitespace and return the same matching students as the trimmed search term.
Actual Result	Searching with leading whitespace displays “No matching results found,” even though matching student names exist.

Evidence

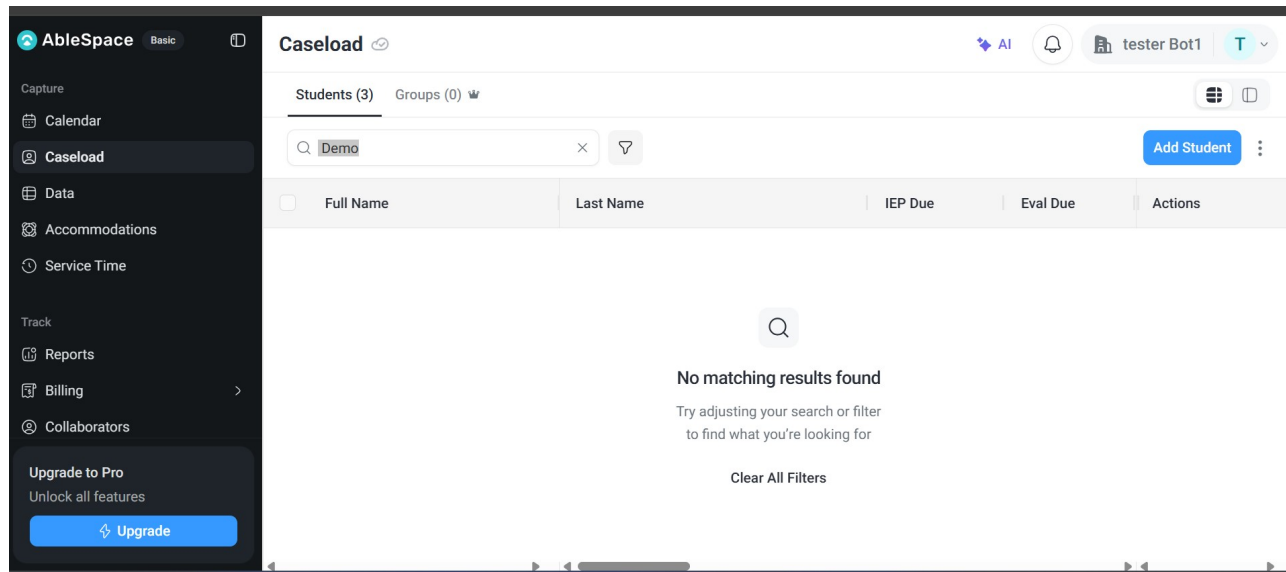

Figure 1 – Search without leading whitespace: matching students are displayed

The screenshot shows the Caseload application interface. At the top, there's a header with 'Caseload' and a search bar containing 'Demo'. Below the header, there's a table with columns: Full Name, Last Name, IEP Due, Eval Due, and Actions. The table displays three rows of student data, each with a 'Take Data' button in the Actions column.

☐ Full Name	Last Name	IEP Due	Eval Due	Actions
☐ Demo Student3updated	Student3updated	-	-	Take Data
☐ Demo Student1	Student1	03/26/2023	03/25/2023	Take Data
☐ Demo Student2	Student2	03/02/2023	02/28/2023	Take Data

Figure 2 – Search with leading whitespace: no matching results are displayed

BUG-03 – Refreshing View Data redirects the user to Caseload instead of retaining the current View Data context

Bug ID	BUG-03
Title	Refreshing View Data redirects the user to Caseload instead of retaining the current View Data context
Severity	Medium
Priority	Medium
Environment	http://staging.ablespace.io/caseload — 08-Oct-2026
Browser / Device	Google Chrome on Windows 11 desktop
Reproducibility	Always; reproduced on 3 refresh attempts
Steps to Reproduce	1. Open a student's View Data page. 2. Confirm that “Reading updated Goal” is visible. 3. Refresh the page using Ctrl+R. 4. Wait for the page to finish loading.
Expected Result	Refreshing should retain the current View Data context, or otherwise preserve the user's current location and selected student Data view.
Actual Result	After refresh, the application redirects to Caseload instead of retaining the View Data screen. The goal remains saved and can be reopened; the issue is the loss of the current View Data context.

Evidence

Figure 1 – Before refresh: View Data page with “Reading updated Goal” visible

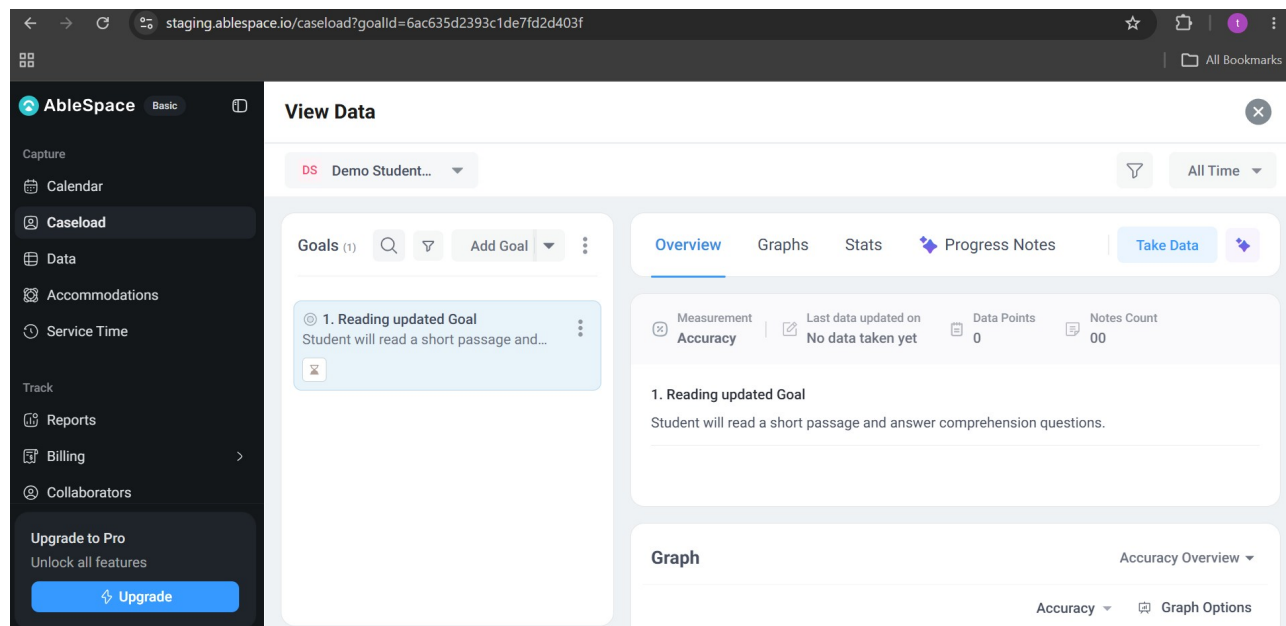

Figure 2 – After refresh: application returns to Caseload
